

STEPHEN ONGPIN FINE ART

Herman HENSTENBURGH (Hoorn 1667 - Hoorn 1726)

A Sun Conure Parrot and a Yellow-Backed Oriole

Gouache and watercolour on vellum.

Signed H: Henstenburgh. fec at the lower left.

Inscribed N.132 - Herman Henstenburgh on the verso.

301 x 204 mm. (11 7/8 x 8 in.)

The Dutch port town of Hoorn, where Henstenburgh lived and worked, was an important home base of the Dutch East India Company, and the artist would have had ample opportunity to study live or stuffed specimens of exotic birds brought back to Holland on the ships of the Hoorn fleet. The present sheet depicts two rare South American birds, and serves as a fascinating and very early visual record of these particular species in European art. Indeed, this drawing would appear to predate, by several decades or more, the authoritative scientific descriptions of both types of birds depicted in it.

The larger of the two birds may be identified as a Sun Conure parrot (*Aratinga solstitialis*), a species native to areas of the north-eastern part of South America, in particular northern Brazil and Guyana. The parrot, which grows to an average of thirty centimetres in length, is described in ornithological literature from the 1730s onwards, although specimens must have been in circulation in Europe somewhat earlier. Long popular in Europe as captive pet birds, the severe decline of its population has meant that the Sun Conure is today listed as an Endangered species. Although Henstenburgh may have been working from a preserved specimen, it is equally likely that this watercolour was based on a live bird, since Sun Conure parrots were already established in Europe as expensive pets by the end of the 17th century.

The smaller bird would appear to be a Yellow-backed Oriole (*Icterus chrysater*), native to Central

America and northern South America. It is interesting to note that Henstenburgh has here depicted the oriole seemingly in the act of catching insects. Since the bird is indeed insectivorous, this would imply that the artist was perhaps working from a live specimen that he had studied closely. The presence of a Yellow-backed Oriole in this drawing is also unusual in that the species was not formally named and described until over a hundred years later, in the 1840s. The present sheet, therefore, not only serves as an accurate record of two rare and valuable South American birds, but may perhaps also reflect a thriving contemporary market for such exotic creatures.

Depictions of exotic birds account for only a small part of Henstenburgh's oeuvre as a draughtsman, and just a handful of highly finished watercolour and gouache studies of birds by the artist have appeared on the art market in the past thirty years. Other gouache and watercolour drawings of exotic birds by Henstenburgh are today in the collections of the Amsterdam Museum in Amsterdam, the Herzog Anton Ulrich-Museum in Braunschweig, the Palazzo Pitti and the Uffizi in Florence, the Städelisches Kunstinstitut in Frankfurt, and elsewhere.

Provenance:

An unidentified collector's mark, with the letter U in a circle, stamped in red ink on the verso.

Artist description:

Herman Henstenburgh (or Henstenburg) was a pupil of the natural history draughtsman Johannes Bronckhorst, whose studio in Hoorn he entered in 1683, and who also trained the young artist in his other vocation as a pastry baker. Indeed, throughout his life Henstenburgh seems to have worked as a baker in Hoorn, a relative artistic backwater, and his watercolours, despite being greatly admired, remained something of a hobby. The influence of Bronckhorst, as well as of Pieter Holsteyn the Younger, was to be important for Henstenburgh, particularly on his choice of subjects. As a draughtsman, he specialized in depictions of birds, insects, flowers and fruit, usually drawn on vellum. The contemporary biographer Johan van Gool noted that Henstenburgh's earliest works were of birds and insects, and that it was not until around 1689 that he also began to produce finished watercolour drawings of fruit and flowers. Van Gool further commented that the artist was able to achieve a particular richness and intensity of colour in his drawings by experimenting with pigments to perfect a new form of watercolour technique.

Through the intervention of the painter Mattheus Terwesten, Henstenburgh was introduced to a number of important local collectors, notably Pieter van den Brande. Another significant patron was the botanical collector Agneta Blok, a collector of exotic plants and flowers who also commissioned natural history drawings of animals and birds from Bronckhorst, Holsteyn, Herman Saftleven and Maria Sibylla Merian. Further afield, the Grand Duke Cosimo III de' Medici in Florence is known to have owned three drawings by Henstenburgh as early as 1700.

Henstenburgh was never able to make a living from his art, however, and as Van Gool relates, 'There he sat in his native town, with all his works of art about him, as if in oblivion, for rarely did he receive a visit from an art-lover.' It was not until several years after his death that Henstenburgh's drawings became especially popular with collectors, particularly in England. Van Gool notes that in 1750 he saw the Rotterdam collectors Jan and Pieter Bisschop, at an Amsterdam auction, pay 105 guilders for one of the artist's watercolours of fruit. Henstenburgh's son Antoni inherited his business as a pastry chef and was, like his father, also an amateur draughtsman of bird and insect subjects, and sometimes copied his father's works.
